

Compact-X System

Sliding solution for frameless showers

The CRL Compact-X system is a sliding solution for frameless showers, combining the latest technology with an attractive, minimalist design.

Quick and simple to install, the system conceals all of its sliding components within the top track, giving a pleasing aesthetic appearance. The soft brake system provides an advanced sliding action, whilst enhancing safety; fingers are protected from becoming trapped on the closing cycle of the glass panel, which itself is also protected from impact damage, putting safety first for all users.

While the trend for hardware finishes in the bathroom previously leaned towards chrome, for a versatile finish that co-ordinates with brassware, a more recent trend is shifting towards unique finishes, such as matte black. Offered by CRL, this finish is equally as versatile and creates a sophisticated, high quality look.

- Complete with double soft close
- Minimum door width 675mm
- For 8 and 10mm glass
- 70kg weight capacity
- Available in Matte Black, Brushed Nickel and Bright Anodised
